COMPREHENSIVE DIAGNOSTIC REPORT

Facility: City Central Diagnostics & Research Center

Report ID: REF-90210-2026

Date of Examination: April 1, 2026

1. Patient Profile

- **Name:** Alex Johnson
- **Date of Birth:** June 15, 1988 (Age: 37)
- **Gender:** Non-binary
- **Sample ID:** S-55421
- **Primary Physician:** Dr. Sarah Vance, MD (Cardiology)

2. Clinical History & Vitals

- **Reason for Visit:** Routine annual physical and follow-up on mild hypertension.
- **Blood Pressure:** 128/82 mmHg (Slightly elevated)
- **Heart Rate:** 72 bpm (Resting)
- **Body Mass Index (BMI):** 24.2 (Normal)

---

3. Advanced Biochemistry Panel

Test	Result	Reference Range	Units	Flag
HBA1c (Glycated Hb)	**5.4**	4.0 – 5.6	%	Normal
Total Cholesterol	**210**	< 200	mg/dL	**High**
HDL (Good)	**45**	> 40	mg/dL	Normal
LDL (Bad)	**145**	< 100	mg/dL	**High**
Triglycerides	**160**	< 150	mg/dL	**High**
Tsh (Thyroid)	**2.1**	0.4 – 4.0	mIU/L	Normal

---

4. Organ Function Analysis

Renal Function (Kidney)

- **BUN:** 14 mg/dL (Range: 7–20)
- **eGFR:** 105 mL/min/1.73m² (Normal: >90)
- **Uric Acid:** 5.2 mg/dL (Range: 3.4–7.0)

Hepatic Function (Liver)

- **ALT (SGPT):** 28 U/L (Range: 7–55)
- **AST (SGOT):** 22 U/L (Range: 8–48)
- **Bilirubin (Total):** 0.8 mg/dL (Range: 0.1–1.2)

---

5. Imaging Impression (Radiology)

Procedure: Chest X-Ray (Posterior-Anterior View)

Findings: * Lungs are clear; no evidence of pleural effusion or pneumothorax.

- Cardiac silhouette is within normal size limits.
- Mediastinal structures appear unremarkable.
- **Conclusion:** Normal radiographic appearance of the chest.

---

6. Clinical Summary & Recommendations

1. **Lipid Profile:** Results indicate mild hyperlipidemia (elevated cholesterol). It is recommended to reduce saturated fat intake and increase aerobic exercise to 150 minutes per week.
2. **Blood Pressure:** Reading is "Elevated." Recommend monitoring BP at home twice weekly and reducing sodium intake.
3. **Follow-up:** Repeat Lipid Panel in 3 months to assess the impact of lifestyle changes.
